‡ Because the unweighted sample in this estimate is less than 30 and the weighted total is less than 200,000 (based upon a population less than 200,000, implying questionably small sample size), the estimate, its confidence interval estimate, and any other estimate associated with it are unlikely to be accurate enough to reveal useful information.

¹ A 90 percent confidence interval (C.I.) is a measure of an estimate's variability. The larger the confidence interval in relation to the size of the estimate, the less reliable the estimate.

² Federal surveys, including the SIPP 2004 Panel, give respondents the option of reporting more than one race. These data can be shown in two ways: (1) as mutually exclusive from other race groups, which may be denoted by "alone" or (2) not mutually exclusive with other race groups, denoted by "alone or in combination with other race groups." The figures, tables, and text in this report show race using the first method.

³ Hispanics may be any race, data in this report for Hispanics overlap data for racial groups. Data users should exercise caution when interpreting aggregate results for these groups because they consist of many distinct subgroups that differ in socioeconomic characteristics, culture, and recency of immigration.
